

Laboratorio de Computación IV

Clase 15

Andrés Fortier

Repaso

- Introducción a Relaciones en ActiveRecord.
- Usamos un *helper* de *Devise* para asignar el autor del post en base al usuario logueado.
- *rails_admin Gem*.

Seeds

- Conjunto de datos iniciales para una aplicación.
- Se usan principalmente en desarrollo, para que todos puedan comenzar (cuantas veces sea necesario) de un mismo punto de partida.
- En rails existe un archivo `db/seeds.rb` para esto.

Seeds

- Vayan al sitio de laboratorio 4 y copien el contenido de “Primer seed” en `db/seeds.rb`

```
db/seeds.rb
```

```
joeUser = User.new(  
  :email           => "joe@example.com",  
  :password        => "12345678",  
  :password_confirmation => "12345678"  
)  
joeUser.save!  
  
janeUser = User.new(  
  :email           => "jane@example.com",  
  :password        => "12345678",  
  :password_confirmation => "12345678"  
)  
janeUser.save!
```

Seeds

- En una consola

```
$ bin/rake db:seed
```

- Vayan a <http://localhost:3000/admin/user>

Seeds

The screenshot shows a web browser at `localhost:3000/admin/user` displaying the 'Ejemplorails Admin' interface. On the left is a navigation sidebar with 'Users' selected. The main content area is titled 'List of Users' and includes a breadcrumb 'Dashboard / Users'. Action buttons for 'List', 'Add new', and 'Export' are present, along with a 'Filter' input and a 'Refresh' button. A table lists four users with columns for selection, ID, email, password reset status, and creation time. A summary '4 users' is shown at the bottom.

<input type="checkbox"/>	Id	Email	Reset password sent at	Remember created at
<input type="checkbox"/>	4	jane@example.com	-	-
<input type="checkbox"/>	3	joe@example.com	-	-
<input type="checkbox"/>	2	usr2@test.com	-	-
<input type="checkbox"/>	1	usr1@test.com	-	-

4 users

Seeds

- En una consola intenten nuevamente

```
$ bin/rake db:seed
rake aborted!
ActiveRecord::RecordInvalid: Validation failed: Email has
already been taken
/home/andres/.rvm/gems/ruby-2.0.0-
p598@ejemplorails/gems/activerecord-
4.1.8/lib/active_record/validations.rb:57:in `save!'
...
```

Seeds

- Ejecutemos ahora

```
$ bin/rake db:reset
-- create_table("articles", {:force=>true})
  -> 0.1707s
-- add_index("articles", ["author_id"],
{:name=>"index_articles_on_author_id"})
  -> 0.1502s
-- create_table("users", {:force=>true})
  -> 0.1742s
-- add_index("users", ["email"],
{:name=>"index_users_on_email", :unique=>true})
  -> 0.1571s
-- add_index("users", ["reset_password_token"],
{:name=>"index_users_on_reset_password_token",
:unique=>true})
  -> 0.1657s
-- initialize_schema_migrations_table()
  -> 0.3398s
```

Seeds

- Vayan nuevamente a la página de admin

List of Users

Signed in successfully.

0 articles			

Seeds

- Vayan al sitio de laboratorio 4 y copien el contenido de “Segundo seed” en ``db/seeds.rb``

```
db/seeds.rb
```

```
...
janeUser.save!

Article.create!(title: 'First Post', text: 'My first
post!', author: joeUser);
Article.create!(title: 'Second Post', text: 'Another
post', author: joeUser);
Article.create!(title: 'Third Post', text: 'Yet another',
author: janeUser);
```

Seeds

- Maten el server.
- ``bin/rake db:reset``
- Levanten el server.
- Vayan a la página de admin utilizando el usuario *joe@example.com*

3 articles

Restringir los listados

- Vayan a <http://localhost:3000/>
- ¿Cómo hacemos para mostrar sólo los del usuario logueado?

```
/app/controllers/articles_controller.rb
class ArticlesController < ApplicationController
  ...
  def index
    @articles = Article.where(:author => current_user)
  end
  ...
end
```

- Recarguen <http://localhost:3000/>

Restringir los listados

- Cuidado: que no listemos un artículo no significa que no esté accesible
 - <http://localhost:3000/articles/3>
- Esto es parte de un tema que veremos en breve (autorización).

“Leyendo” el log del server

- Vuelvan a cargar `http://localhost:3000/`
- Veamos el log de salida del servidor

```
Started GET "/" for 127.0.0.1 at 2015-05-10 12:35:23 -0300
Processing by ArticlesController#index as HTML
  User Load (0.3ms)  SELECT "users".* FROM "users" WHERE
"users"."id" = 1 ORDER BY "users"."id" ASC LIMIT 1
  Article Load (0.2ms)  SELECT "articles".* FROM "articles"
WHERE "articles"."author_id" = 1
  Rendered articles/index.html.erb within layouts/application
(1.5ms)
Completed 200 OK in 50ms (Views: 47.4ms | ActiveRecord:
0.5ms)
```

Relaciones 1 a N

- Vimos que un artículo pertenece a un usuario.
- Un usuario puede tener mas de un artículo.

articles

id	title	text	author_id
1	First Post	My first post!	1
2	Second Post	Another post	1
3	Third Post	Yet another	2

users

id	email
1	joe@example.com
2	jane@example.com

Relaciones 1 a N

- Debemos indicarle a *ActiveRecord* que existe una relación 1 a N:
 - Del lado del artículo (ya lo hicimos)
 - Del lado del usuario

```
/app/models/user.rb
```

```
class User < ActiveRecord::Base
  #Include default devise modules. Others available are:
  #:confirmable, :lockable, :timeoutable and :omniauthable
  devise :database_authenticatable, :registerable,
         :recoverable, :rememberable, :trackable, :validatable

  has_many :articles, foreign_key: "author_id"
end
```

Relaciones 1 a N

- En una consola

```
$ bin/rails console
> user = User.find(1)
  User Load (0.2ms)  SELECT  "users".* FROM "users"  WHERE
"users"."id" = ? LIMIT 1  [["id", 1]]
=> #<User id: 1, email: "joe@example.com",...>
> user.articles
  Article Load (0.2ms)  SELECT "articles".* FROM "articles"
WHERE "articles"."author_id" = ?  [["author_id", 1]]
=> #<ActiveRecord::Associations::CollectionProxy [#<Article
id: 1, title: "First Post", text: "My first post!",
created_at: "2015-05-10 15:14:59", updated_at: "2015-05-10
15:14:59", author_id: 1>, #<Article id: 2, title: "Second
Post", text: "Another post", created_at: "2015-05-10
15:14:59", updated_at: "2015-05-10 15:14:59", author_id: 1>]>
```

Relaciones 1 a N

- Rails define un conjunto de métodos para esas relaciones

```
> user.articles.size
=> 2
> user.articles.empty?
=> false
> user.articles.where({title: "First Post"})
Article Load (0.5ms)  SELECT "articles".* FROM "articles"
WHERE "articles"."author_id" = ? AND "articles"."title" =
'First Post'  [["author_id", 1]]
=> #<ActiveRecord::AssociationRelation [#<Article id: 1,
title: "First Post", text: "My first post!", created_at:
"2015-05-10 15:14:59", updated_at: "2015-05-10 15:14:59",
author_id: 1>]>
```

Relaciones 1 a N

```
> user.articles.clear
  (50.8ms)  begin transaction
  SQL (0.6ms)  UPDATE "articles" SET "author_id" = NULL WHERE
"articles"."author_id" = ? AND "articles"."id" IN (1, 2)
[["author_id", 1]]
  (136.5ms)  commit transaction
=> #<ActiveRecord::Associations::CollectionProxy []>
> article = Article.first
  Article Load (0.2ms)  SELECT  "articles".* FROM "articles"
ORDER BY "articles"."id" ASC LIMIT 1
=> #<Article id: 1, title: "First Post", text: "My first
post!", created_at: "2015-05-10 16:07:36", updated_at: "2015-
05-10 16:07:36", author_id: nil>
> article.save!
  (0.3ms)  begin transaction
  (0.1ms)  rollback transaction
ActiveRecord::RecordInvalid: Validation failed: Author can't
be blank
...
```

Iniciemos nuevamente

- Maten el server.
- ``bin/rake db:reset``
- Levanten el server.

Restringir los listados

- Podemos hacerlo mas elegante

```
/app/controllers/articles_controller.rb
class ArticlesController < ApplicationController
  ...
  def index
    @articles = current_user.articles
  end
  ...
end
```

- Recarguen <http://localhost:3000/>

Tarea para el hogar

- Lean sobre relaciones en Rails
 - http://guides.rubyonrails.org/v4.2.6/association_basics.html
- Lleven a su aplicación de openshift devise y rails_admin.
- Trabajen sobre su aplicación.
